

A lot of things get into your eyes.

Fortunately, one thing gets them all out.

OcuFresh® Eye Wash removes pollutants and allergens before they become a source of irritation & redness.

Your eyes are bombarded every day by dust, dander, smoke, bacteria, chemicals, make-up residue and more. This causes redness, itchiness, burning or soreness. The key to avoiding this is regular preventative care. Daily eye showers with OcuFresh help protect your eyes from getting so distressed in the first place.

Your eyes can look & feel noticeably better with OcuFresh.

Using OcuFresh Eye Wash daily will make your eyes look clearer and feel better while helping to protect their long term health by:

- Removing pollutants and bacteria before they attach to the eye.
- Removing smoke, mascara flakes, chemicals, garden care products, dirt, sand and other debris that can irritate or scratch the eyes' surface.
- Preventing allergen build-up from pollens & pet dander.
- Removing bacteria associated with contact lens application.
- Increasing the supply of moisture and nutrients to your eyes.
- Reducing stress on nerves, pressure points & muscles.
- Neutralizing the drying effects of make-up remover, face cleansers, the sun's glare and long hours at the computer.

OcuFresh is the smartest choice for relief.

When it comes to real relief for your eyes, other options you are familiar with may not be in your best interest. Here's why:

- Tap water contains chlorine. So flushing the eyes regularly with tap water can cause burning rather than bring relief.
- Eye drops that remove redness make your eyes' blood vessels shrink. This is how they "get the red out." However, constantly forcing your eyes' blood vessels to constrict is not healthy and can lead to long-term problems.
- Eye lubricants are not eye washes and do not offer the benefits of cleaning. They simply add moisture to dry eyes.
- All other eye washes contain preservatives. This can create problems since preservatives are known to cause irritation and increase the risk of ocular allergies.

Only OcuFresh is preservative-free and convenient to use.

OcuFresh's unique formulation and sterile single-dose package design makes it safe and reliable for daily use by children and adults of all sensitivity levels.

- Only OcuFresh is formulated with pure, preservative-free ingredients in accordance with stringent medical standards.
- Only OcuFresh comes packaged in sterile, single-use tubes that avoid the transfer of bacteria to the eye and can be conveniently carried anywhere.

OcuFresh can be found in the eye care section of the following fine stores:

Eye doctors and consumers like what they see with OcuFresh.

"I use OcuFresh to refresh my eyes before going out at night because they are so stressed and strained from the workday. It was a bonus for people to comment on how sparkling my eyes have become. They say I now have a twinkle."
— Triscina E. Orange, CA

"I like OcuFresh Eye Shower because it gently rinses away the eyes' debris. I recommend my patients use it on a daily basis."
— Dr. Henry Oates, O.D., Beverly Hills, CA.

"Since implementing the eye wash cleansing system, our patients feel their eyes are cleaner, healthier, and more refreshed with daily contact lens wear. This has been especially valuable during allergy season."
— Dr. David Stamps, O.D., San Francisco, CA
